DESCRIPTIVE
PRICE LIST

EARL E. PLATELL

AURORA, OHIO

We are presenting you with our 1953 catalogue with the hope you will enjoy it. Our comments are based on our own growing experience, and if you do not agree with us, please bear in mind that performance will vary under different soil and climatic conditions. We do not all see alike, and if our reports in your opinion, do not do justice to a variety, please bear in mind that what we report is what we have observed under our own growing conditions. Having three test gardens in our immediate neighborhood, we were able to observe a lot of the newer varieties, some even before they were named. On the whole our growing season was considerably warmer than average, and a lot drier. This was particularly noticeable at the local shows where a large percentage of the spikes had fewer buds and much shorter heads. Our irrigation system got lots of usage this year and our straw mulch was a real life saver.

EXPERIMENTS

Once again, we tried out some new experiments and continued some of the old ones. Our report—

STRAW MULCHING—A continuation from last year and really a life saver under conditions such as we had last season. One has only to look at a variety in a row and then walk down to where the mulch stops to see the difference. Troubles—wheat and oats grow up in between the rows, giving one the appearance of a wheat field, considerable difficulty in plowing under the straw in the fall. Benefits—better growth, less water needed, cooler soil, lots of humus in the ground for the next several years.

SEEDS IN BANDS. We started out to put only four or five seeds in a three inch band, but tried putting as high as eighteen or twenty to a band. Some crosses seem, naturally, to make bigger bulbs than others, and we have had as high as eighteen bulbs, half inch or better in size from one three inch band. It seems that the bulbs space themselves throughout the band, some deeper than others. Other bands will come up with as high as twenty bulbs, maybe a quarter inch or better in size. Starting them early, either inside or in the greenhouse, and moving them into the cold frames when the weather permits give us extra growing time, both at the start and the end of the season. About 90% of the bulbs will bloom the next growing season. We recommend cyprus bands as they last through the growing season nicely.

We have been watching an experiment in growing show quality spikes. Two bulbs, one a large bulb grown from a bulblet or a number six bulb, with a scar not over a quarter inch was pitted against an older bulb with a scar of an inch or more. The theory was that the bulb with the larger scar would have a greater root area and thus produce better spikes, the reasoning being that the more roots a bulb has, the more water, fertilizer etc. it can absorb. The bulb with the small scar has only a limited root area. Try this for yourself and see. We would be inclined to say that the large bulb with a large scar will outperform a large bulb with only a small scar. This experiment is still running and our results are not conclusive.

EARLY ORDERS

You will notice that nearly every cataloguer asks for early orders. The reason is that work bunches up late in the spring and one cannot give the same careful attention as is necessary when there is a big pile of orders ahead. If the same number of orders were scattered over several months each would receive more careful attention. Then too, stocks are better early in the season, and all sizes are in stock. Our planting season starts around April 1st and from that time on, our time becomes more and more limited. This also has the effect of cutting down on the varieties we have for sale.

Orders sent in after the middle of March should provide for substitution of size and if possible, of variety. We always try to give better value on a substituted item and if possible, give a newer variety than was originally ordered.

EXTRAS

We wish you would suggest the extras you might want. We have no way of knowing the varieties you are growing and we would like if possible to give you something you do not have, rather than give you something you are growing. Our idea is that if you like the newer variety we send, you may want to order some the next year.

The number of extras we can give depends upon the size of your order and the time we get it. The earliest orders, even though they are not shipped until late March or early April usually get the better extras, largely for the reason that we have more time to give in filling the order, we can look around our stock and pick out something nice.

We would appreciate your suggesting extras you would like.

SHIPPING

Shipments can be made almost anytime if they are given special handling, although we like to start shipping early in March. Weather reports are checked carefully before we start shipping, especially to the colder states. If you want something in a hurry, just note it on your order.

SUBSTITUTIONS

We do not substitute unless you give us permission to do so. Early in the season, there is hardly any need of substituting, but as the season gets along, stocks of some varieties become limited. We would, therefore, appreciate your permission to substitute sizes on orders sent in after March 15th, and if possible, we would like to have your permission to substitute varieties on all late orders. If your order is marked no substitute, we will refund.

PRICES AND TERMS

Costs still continue to rise, everything going into producing high grade bulbs has gone up. We have tried to keep our prices in line with our costs. We do not try to undersell the other fellow, for we believe that you would rather have a good bulb at a fair price than several poor bulbs at a cheap price.

Please do not order less than the minimum quantity shown. Most of the prices shown will give the each price and also a ten price. Five bulbs may be purchased for half the ten price. 100 bulbs may be purchased for 8 times the 10 price, i.e., 10/\$1.00—100/\$8.00. Twenty-five bulbs may be purchased at the hundred rate.

PLEASE NOTE—If you use the hundred rate, shipments will be made F.O.B. Aurora, Ohio. In other words you pay the shipping costs. If your order includes retail items as well, shipment will be made collect, but enough extras will be included to cover the shipping charges on the retail items.

We prepay shipping costs on all retail shipments where the order totals \$5.00 or more. Under that amount, please include 35c for packing and shipping costs.

TERMS—Cash with order; check or money order preferred. Minimum Canadian and foreign order is \$10.00.

ARASAN

All our bulbs are dusted with a mixture of Arasan and D.D.T. at the time of cleaning. Our newly purchased bulbs are dusted with straight Arasan before they are planted. We believe this is one reason we have such a good disease control. Arasan is convenient and much easier to use than a dip. We put a few bulbs in a bag, a spoonful or two of Arasan, we shake the bag thoroughly a few times and each bulb comes out with a coating of Arasan. No harm is done if you cannot plant them right away. With the large number of bulbs we have to plant, the time saved by this method is very great.

We have eight ounce cans available if you want them. The cost is \$1.00.

PLANTING INSTRUCTIONS

Planting instructions will be included in all shipments. The latest up to date information prepared by experts.

EXPLANATION OF LISTINGS

ABU HASSAN (K & M 47) 77 Days 378

This is atypical heading to a variety listing. ABU HASSAN is of course the name of the variety (K & M 47) is the name of the introducer and the year of introduction.

77 Days—average time from planting to blooming of a large bulb. Smaller bulbs will take longer.

378 is the color classification and size.

Then follows a brief description of the variety with comments on growing habits performance, faults, etc. The phrase "well balanced" or "Well proportioned" is used frequently. It means that the flower head starts big at the bottom and gradually tapers upward to a point. The flowerhead must match the handle too, in order to be well balanced. A tall spike with a short flowerhead should not be classed as well balanced, nor would a spike with a lot of florets open but with the buds above the opened florets still tight be so classed.

Price and size follows, "L" indicates large size bulbs, measuring more than 1¼" in in diameter. "M" is a medium size bulb, ¾" to 1¼" in diameter. "S" indicates a small bulb, under ¾" in diameter. "B" stands for bulbets.

You will get best results from the large bulbs although they will cost you more.

Medium size bulbs will often produce show quality spikes, and will often produce saleable spikes. Growing conditions are quite a factor in this case.

Small bulbs will frequently, although not always bloom. The spike they produce is not top quality, but you should get a large bulb to grow on the next year. They are cheaper to buy if you do not have to have results the first year. Most smalls are grown from bulblets.

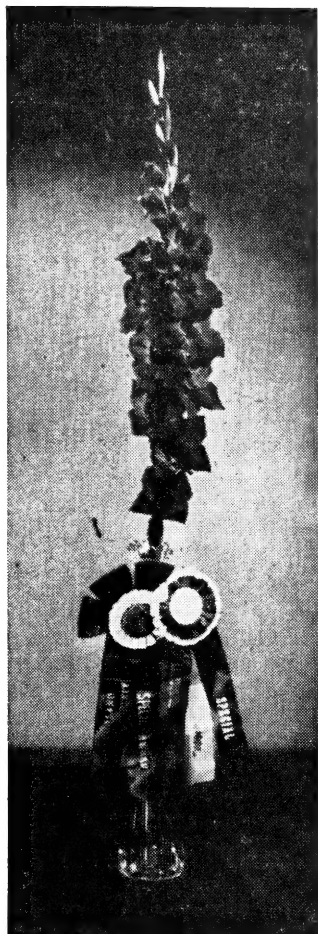

Bulblets or cormels are the cheapest way to get started in a variety. You should figure on only getting small bulbs from bulblets the first year of growing. You may be able to get large and medium bulbs under the best of growing conditions, and with some varieties. These small bulbs, grown on the next year should make large bulbs. Thus it takes two years to get a big bulb from a bulblet. Some bulblets are very hard to germinate and you may get a very poor stand. Other varieties seem to germinate every bulblet. Peeling or cracking the shell will help in germinating. Expensive bulblets should be peeled or cracked before planting. They can be planted as early as the ground can be worked in the spring.

A WORD OF CAUTION—Please note that we are quoting sizes by diameter and not circumference. You will see some large display adds once in a while, offering "large" bulbs, fully one and three quarters inches in circumference for a very cheap price, say 100 for \$2.00 or so. That size $1\frac{3}{4}$ " in circumference, is properly classed as small. Do not be misled. Where "Pkge." appears after the Bulblet listing, it means that the package will contain from 25 to 50 bulblets.

We aim to sell only quality stock, the kind we like to get and the kind that is worth the little extra that it costs. Our fields are state inspected, and our stock is state inspected before we start shipping. Rogueing is done regularly and any doubtful bulbs are pulled and burned, regardless of their cost or scarcity. This is expensive—it kind of hurts to pull a \$5.00 bulb—But it more than pays in satisfaction in feeling sure you are putting out clean, disease free bulbs.

GUARANTEE

We guarantee our bulbs to be true to name and free from disease or thrip. Please open the package immediately upon receipt, examine carefully, and if not satisfactory, advise us at once. All of us make errors once in a while and if any of the bulbs are found to be not as represented, we will either refund your money on their return, or we will replace the unsatisfactory stock. However, we can at no time be liable for more than the original amount paid for the bulbs. Due to conditions beyond our control, we are not responsible for the growth of bulbs or bulblets. All orders are placed with this understanding. Both the field and the bulbs have been state inspected, giving us added assurance that are shipping disease and thrip free bulbs.

GARNET RUFFLES

M. O. MAYNARD

Deep rich velvety red, clean and clear, with a little silvery edging on the edge of the petals.

Ruffled and fluted florets shading somewhat darker toward the edges.

Eight open, six to eight in color on 46" to 54" straight spikes with excellent balance.

Class352

Days to Bloom85

GARNET RUFFLES will be a prize winner on the show tables and it has the makings of an excellent commercial.

VERA (Pazderski 53)

95 days

466

(Corona x Elizabeth the Queen) Seedling No. 17-3. Originators Description — Light blue lavender a little lighter on the lower petal but almost a solid color. 5" Ruffled florets on an 18 bud spike with 6 open and six in color. Flowerhead 25", field height 54".

Our comments—Vera looks good for both show and commercial work. With a little care, will open more than six, but you can count on six without any trouble. Florets are nicely ruffled, well placed and well attached. Spike is nicely tapered, tall and straight.

Worthy of a trial—We think you will like it very much.

Best seedling scoring 86½ points and Grand Champion Grove City 1952.

Price— 1 Bulb— 10 Bulblets \$ 3.00
10 Bulbs—100 Bulblets \$24.00

COPPER LUSTRE (Pazderski 53) 75 days 580

Seedling B 24-3 (Elizabeth the Queen x Burma) Rose, with copper colored edges, shading lighter to a dark tan interior. A red mark on the lower petal lights up the interior of the floret. Very ruffled, square type of florets, 5½" to 6", with 17 to 18 buds. Field height 54 inches, up to 8 open with 6 to 8 in color.

Best seedling, Wheeling 1948, Grove City 51.

Our Comments—A fast progogator and a good grower. Spikes become a little top heavy if left to open up in the field, but cut and opened up inside, they are very satisfactory.

This is a flower for the arrangers, an unusual color, something you have all been searching for to give that unusual effect in your arrangement work. Florists like it.

**Price— 1 Bulb and 10 bulblets \$1.50
10 Bulbs and 100 bulblets \$12.00.**

BETTY BRIGHT (Pazderski 53) 80 days 401

Seedling B 17-2 (Corona x Elizabeth the Queen) Originators description—White with cream lip and rose markings, ruffled wide open 5¼" florets eight open five in color. Uniform grower, field height 60" flowerhead 26", 19 buds. Good propagator.

Best Seedling Pittsburg 1948.

East Lansing Trial Garden 1050 rated 83.8.

Award of Merit with 85 points at Detroit 1950.

Our comments—More a commercial than a show glad as its performance in the field will enable a grower to get the whole planting cleaned up in a short time.

**Price—One bulb and 10 bulblets \$1.50
Ten bulbs and 100 bulblets \$12.00**

D'ARCY (Pazderski 53) 75 days 440

Seedling B 64-1 (Myrna x Corona)—Originators description—Light blush pink, yellow on the lower petals and in the throat. 5" Ruffled florets on a 22 bud spike, eight open and six in color. Flowerhead 30", field height 64". Blooms in 75 days. Early—Good propagator.

American Home Achievement Award Detroit 1951.

Award of Merit Detroit, 1952.

Rated 80.2 East Lansing Trial Garden 1950.

Our comments—looks and performs like a good commercial, the pink being somewhat flecked in the outer edges of the florets, otherwise excellent. Probably not a show glad, but a good commercial. Can be cut 18" off the ground and still give you a four foot spike.

S 5/25c—10/40c B Pkg. 25c

ADOBE (Burns 49) 85 days 407

Deep cream with a light purple rosaline blotch. Sometime will have a shading of rosaline purple toward the petal edges. Nicely ruffled with wide open florets. Will hold about 6 open on tall straight spikes.

Price—L 50c M 25c S 2/25c B 10/25c

ADORATION (Klein 48) 70 days 460

A very acceptable early variety in a pink orchid shade. Creamy white throat. Holds five or six open on tall willowy stems. Not a world beater, but one that fills in on the early market trade to very good advantage. Color blends well with other colors. Florets have that crispy look and are lightly ruffled.

Price—L 2/25c—10/\$1.00 M 2/15c—10/70c

S 5/25c—10/40c B Pkg. 25c

ALBION (Palmer 51) 95 days 300

A tall husky grower, exceptionally tall. Florets are a clean white, six to eight open, and plenty of buds in color. It is a late bloomer which is perhaps a handicap, but it fits nicely into the late season for us. Nice exhibition and excellent commercial. Slow propagator.

Price—L 75c M 50c S 35c B 10/\$1.00

ALGONQUIN (Palmer 39) 80 days 536

A strong healthy grower of tall well proportioned spikes with 6 to 8 needlepointed bright scarlet florets open at one time. There is a light marking down the midrib. Good florists flower and when well grown, good competition on the show table.

Price—L 2/25c M 2/15c B Pkg. 25c

ALJECHIN (K & M 51) 85 days 470

A glistening deep violet purple, shading darker in the throat—quite attractive. Can hold six or seven open on good, tall spikes of excellent proportions. Healthy grower, good propagator and appears to be headed for a good commercial life. Opens well when cut in tight bud.

Price—L 25c M 20c S 2/25c B 15/25c

ALL GLORY (Tons 46) 70 days 423

A brilliant orange, almost to the scarlet color, with a very prominent and striking purple blotch. Spikes are tall and straight, about six open well attached florets. Burns in the sun, but opens well inside when cut tight. Attractive if you like contrast.

Price—2/30c M 2/20c S 5/25c B 20/25c

ARTHUR RANK (Visser 51) 75 days 540

A light soft pink with a creamy lip, a pastel shade of pink. Looks and grows very much like Greta Garbo, but seems to have a little more and a little better growth. Will produce tall heavy spikes, well proportioned, with about 6 florets open.

Price—L 35c M 25c S 2/25c B 15/25c

ATATURK (Salman 51) 75 days 354

Black red, almost on the purple side, and stiff competition in its class. Holds about six open on tall willowy stems. Some crooking in extremely hot weather. Propogates nicely. Spacing excellent and in general very good. Excellent for arrangement work when working in the dark reds.

Price—L 35c M 25c S 2/25c B 10/25c

ATHENE (Kuhn 49) 75 days 300

Pure white with a creamy throat. Tall straight spikes, with never a crook. Long flower heads with up to eight open and 20 to 25 buds. Stands hot weather and wind very nicely. Early with good commercial prospects. Section champion possibilities.

ATLANTIC (B & P 46) 75 days 422

One of the nicest we grow. Vivid red orange (coral) with tall straight spikes. It is not unusual to have eight open in the field and this is easily possible when opened inside. Every spike in the row seems to be good. Exceedingly effective for basket work. Good show table competition. Recommended for all uses.

BOISE BELLE (Roberts 48) 98 days 333

One of the outstanding glads we grow, seeming to perform well under adverse conditions, and making outstanding spikes when conditions are favorable. Creamy yellow florets, with a well defined harmonious pink halo and a complimentary edging of pink on the lip petals. Will hold as many as twelve open and ten open in the field is not uncommon. Spike is well proportioned with a gradual tapering to the top. Lots of buds in color. Does best from large bulbs. Its only handicap is its lateness. Must be planted early to make the shows.

COLUMBIA (Roberts 51) 85 days 407

There has been a lot of controversy over which is best—Corona or Columbia, and we are inclined to hand it to Columbia. Not too much difference in color, but a lot better attachment. WINSTON (Palmer 41) 80 days 406

Bright clear cream white, shading to a lemon yellow in the throat. Florets are waved, ruffled and have a texture that looks as though they had been hand carved. We wish it would hold more open as that is its main fault. Can hold four to six, on medium tall straight spikes. Florists liked it very much.

MINIATURES

We are offering quite a sizeable number of miniatures and for this reason, we have classified them in a separate section. There has been a steadily rising demand for miniatures and after having grown them for a number of years we can appreciate their usefulness.

Women, who do arrangement work, and the better type florist, one who appreciates beauty, all demand more and more miniatures. For corsage work, center pieces, arrangements, etc., they are hard to beat. We even have some varieties that crook almost naturally, working into hogarth or crescent arrangements to perfection.

We can give you the same general colors in the miniatures as we give you in the large sizes. Some of the varieties are equal in beauty to the large varieeties. Face-ups too are quite useable and are very interesting.

For home use, where you are going to require a number of the same colors at one time, you should purchase a number of bulbs, not just two or three of a variety. Due to the smaller size, miniatures require more spikes to get the full effect. We are not trying to sell more bulbs, we just speak from experience.

PINOCCHIO (Evans 40) 75 days 390

Any arranger should like Pinocchio with its unusual combination of Pink, yellow, green, orange and red, all put up in an attractive package. Five to seven florets are open at one time, spikes are straight, somewhat stretchy, and the florets are ruffled and fluted. Good propagator.

QUEEN OF BREMEN (Zimmer 28) 75 days 268

A shade of lavender pink with a creamy throat. Six open on tall wiry spikes. Still heavy competition in the miniature section. Good for arrangement work, where its tendency to crook is appreciated instead of being penalized. Clean and good.

Price—L 2/25c—10/\$1.00 M 2/15c—10/70c

RED TANAGER 63 days 252

A cute package of deep red, shading darker in the throat, with lightly ruffled pointed petals. Spikes are typical miniature spikes, wiry, medium tall, usually straight. You will like Red Tanager the first time you see it.

ROSETTE (Kuhn 42) 85 days 260

A nice shade of rose pink with a feather of a deeper shade of rose. Holds six to eight open and for a miniature, has a rather tall spike. A very nice miniature and is well liked for exhibition and commercial work.

Price—L 20c—10/\$1.60 M 2/25c—10/\$1.00

ROSY BELLE (Plummer 48) 70 days 264

A medium to deep rose color, with a blotch of deep rose in the throat. Holds five or six open on a medium tall spike. Attractive. Grows well.

Price—L 2/30c—10/\$1.20 M 2/20c—10/80c

RUBY (Kuhn 46) 70 days 252

Medium dark red. Strong healthy grower. Holds about five open on medium tall wiry stems. Somewhat hooded but not enough to detract in any way. For you hybridizers, it seems to transmit its color to a marked extent in its offspring. We like it very much and so do our customers.

SILVERSIDES (Kuhn 47) 70 days 262

A silvery sheen to this bright deep rose makes it easy to see why they called it Silversides. Will hold six open on medium tall wiry stems, typically a miniature in performance. Quite attractive and one that attracts the arrangers.

SMILETTE (Sisson 49) 65 days 262

Lavender rose, rather an odd shade, perhaps caused by the reflection of its wine colored feather. Creamy white throat. Florets are slightly ruffled and will hold 3 to 5 open on a rather compact spike of 15 or 18 buds. Nice.

Price—L 75c M 50c S 25c B 5/25c

SNOW BABY (Stancer 41) 75 days 200

A clean cut white, which will hold four or five florets open on a medium tall, wiry, stem. Quite attractive and well liked.

GARDEN MIXTURE

Our GARDEN MIXTURE has proven popular and each year sees more and more of it being sold. If you do not care for named varieties, but want a nice assortment of flowers in your garden, we would suggest you order our Garden Mixture. The mixture will give you a grand assortment of colors over the whole season. It is made up as your order comes in and if you want darker or lighter colors, just say the word and we will make it up that way. None of the varieties will be named and they are all mixed together as they are taken from the trays.

We know you will be satisfied with our GARDEN MIXTURE.

Price—100 Large Bulbs \$5.00, 50 for \$2.75,
25 for \$1.50.
100 Medium sized bulbs for \$3.00,
50 for \$1.65 and 25 for \$1.00.

NOTE—IF YOU WANT A MIXTURE OF MINIATURES ONLY BE SURE TO MARK THE ORDER THAT WAY. No miniatures will be included in the GARDEN MIXTURE.

GLAD SPECIE SEED

Hard to germinate, even in a greenhouse, but interesting after you have the bulb. We have been able to set seed both on and with several specie bulbs, but so far haven't seen them bloom. Frankly, we do not know too much about specie, and would suggest that you consult your library for such books as Hortus, or the Standard Cyclopedia of Horticulture (Bailey). These seeds were secured from reliable sources but you may find variations in color. Should be interesting to hybridizers.

- G. Alatus—Brick red, sweetly scented. 75c per 10 seeds.
- G. Blandus—Pink, many open—50c for 10 seeds.
- G. Gracilis—fragrant, pale lilac, 75c for 10 seeds.
- G. Odoratus Quite fragrant in dark maroon. 75c for 10 seeds.
- G. Tristis Scented yellow, mottled, 75c for 10 seeds.

ODDS AND ENDS

When we get this far in the catalogue, there comes the question each year of the listing of varieties that we may not be sure of how much stock we have. The catalogue is written long before bulbs are cleaned and counted, and it is easy to think you have a lot of large bulbs, only to find when you get them cleaned that they may only rate medium size. Then too, we have to reduce the number of varieties we grow each year in order to make room for newer ones. So maybe the bulb we list is being discarded, for one reason or another, color, growth, propagation, etc. Some of the varieties we list are limited in quantity, they are grown for hybridizing purposes only. The fact that a bulb is listed in our "Odds and Ends" list does not mean that the variety is no good. You will see from some of the varieties listed below, that many of them are very recent introductions, and that some of them are real old timers.

Our stocks of the varieties listed below are not large, so do not be too disappointed if you do not get them. If you see something you want, show it on the order and we will fill it if possible.

IN CLOSING

Well here we are—done at last. It has been quite a task to write this catalogue, it takes lots of painstaking work. To be comprehensive, charming, critical and fair necessitates much reference to notes. Classification of class, color, size, blooming dates, etc. must all be checked. The hardest part of all is to give an unbiased expression of our own opinion. We have tried our utmost to give you results as we see them in our own and neighboring gardens, and to check these with what we see at the shows. Our aim is to help you select the best varieties we can. Comments in this catalogue are from our own observations.

We hope you have enjoyed reading this catalogue and that you can get real value out of it. Your past business has been very much appreciated as were your charming letters. We hope for a further continuation of your patronage.
